

# Marble and Bronze Merge Seamlessly on GT2P's Coffee Table

The designers at Chilean-based studio GT2P have teamed up with New York's Friedman Benda Gallery on a coffee table that elegantly merges bronze with slabs of marble.

This four-legged design sees the marble undergoing a cutout treatment, with the remaining gaps filled in with bronze. Continuing its journey, the bronze seeps into the corner and legs of the table, making for an innovative design that combines cutting-edge techniques with tradition.

The experimental table is set to showcase at Design Miami 2015, which runs from December 1-6.
