

## Technology | Digital Crafting – Explorations Between Analog and Digital

MELBOURNE — Chilean design studio [Great Things to People](#) (gt2P) debuted their CatenaryPottery Printer which explores the boundaries between digital and analog machines.

Throughout the inaugural [Melbourne Design Week](#) (March 16 – 26, 2017), local designers and students used the pottery printer to create their own custom works. The project yielded non- standard forms revealing an almost computer-like statistical algorithm for variable creation, [ArchDaily](#) writes.

*Despite its technological undercurrents, gt2P's printer operates through a low-tech system, using a fabric sling suspended at adjustable intervals to mold liquid clay into beautiful vessels. As ceramic slips, drains, and dries, one-of-a-kind objects are created.*

The project was developed in collaboration with staff and students from the RMIT University School of Architecture and Design, and displayed under the Federation Court atrium at the National Gallery of Victoria.

About gt2p: The architecture and design studio incorporates digital crafting as an approach that brings together the know-how of Chilean artisans and the digital technologies in design and manufacture. We create DNA to generate families of products. Through these generative algorithms or "DNA", we develop products and projects in both personalized and massive ways.
